

Weekly Report

2015.12.21-2015.12.27

1.Project

Data Map Project

- using the Globe of Economic Complexity system made by Harvard University and learn what professional people do to visualize dense geographical data. The system is as below.

- write the demand document and design document of this project

2.Paper Reading

- roughly read 17 papers about Network Structure Visualization, and 8 of them is closely related to this topic. Network included are egocentric dynamic network, social network, semantic network and traffic network. Different methods are used to analyze these network to make the result as well as process more efficient and useful.

3.To Do

- finish the documents of Data Map Project
- read more papers about network structure and classify them
